Groundwater District Summary

Groundwater Sustainability Monitoring & Forecasting System for Balochistan

Chagai District

Reference month: 2026-05 (observed data) Report generated: 09 Sep 2026

RISK LEVEL: CRITICAL

15th percentile of this district's own record for the same calendar month | USDM equivalent: D1 (moderate drought)

Groundwater is well below what is normal for this district in this month. Conditions warrant close monitoring and intervention planning.

Groundwater status

Storage this month	**458.1 mm**
Percentile vs own history	**15th**
Long-term trend	**-0.09 mm per year (declining)**
Historical range	**457.9 - 506.7 mm (mean 461.6 mm)**
Months at Severe Deficit	**24 of 280 observed months**

Rainfall (secondary indicator)

Rainfall, last 12 months	**87.8 mm**
Percentile vs own history	**54th**
Rainfall deficit flag	**No**

Outlook

Forecast horizon	**through 2029-05**
Projected storage	**458.0 mm**
Projected risk level	**Severe Deficit**

Forecasts come from a Prophet time-series model fitted to this district's own history and validated over 5 rolling 24-month test windows against seasonal-naive and ARIMA baselines. Only the first 36 months are presented as reliable.

How to read the risk levels

- Severe Deficit: 0-10th percentile (D2-D4 (severe to exceptional))
- Critical: 10-20th percentile (D1 (moderate drought))
- Moderate Stress: 20-30th percentile (D0 (abnormally dry))
- Stable: 30-100th percentile (No drought classification)
