Groundwater District Summary

Groundwater Sustainability Monitoring & Forecasting System for Balochistan

Quetta District

Reference month: 2026-05 (observed data) Report generated: 09 Sep 2026

RISK LEVEL: STABLE

40th percentile of this district's own record for the same calendar month | USDM equivalent: No drought classification

Groundwater is within the normal range for this district in this month. No drought classification applies.

Groundwater status

Storage this month	**500.0 mm**
Percentile vs own history	**40th**
Long-term trend	**-0.36 mm per year (declining)**
Historical range	**492.0 - 575.0 mm (mean 501.5 mm)**
Months at Severe Deficit	**24 of 280 observed months**

Rainfall (secondary indicator)

Rainfall, last 12 months	**305.2 mm**
Percentile vs own history	**80th**
Rainfall deficit flag	**No**

Outlook

Forecast horizon	**through 2029-05**
Projected storage	**498.3 mm**
Projected risk level	**Moderate Stress**

Forecasts come from a Prophet time-series model fitted to this district's own history and validated on a held-out 24-month period against seasonal-naive and ARIMA baselines. Only the first 36 months are presented as reliable.

How to read the risk levels

- Severe Deficit: 0-10th percentile (D2-D4 (severe to exceptional))
- Critical: 10-20th percentile (D1 (moderate drought))
- Moderate Stress: 20-30th percentile (D0 (abnormally dry))
- Stable: 30-100th percentile (No drought classification)
